

SUSTAN BT is a black vegetable tanning agent.

Properties

Chemical Composition	:	Natural Vegetable derivatives
Appearance	:	Yellowish Brown powder
pH(10% Solution)	:	3.5 - 5.0
Charge	:	Anionic

Features

- SUSTAN BT is based on Natural Vegetable tanning agent. It has the tendency to give black color to the leathers. It can be used for any kind of articles.
It has been suggested to use this product after neutralization of leathers, In retanning it is used along with other retanning agent like syntans and vegetable tannins.
In general for black color leathers black dye cost would be higher than other chemicals, when we use his product in retanning, black dye consumption will get reduced and subsequently process cost also will get reduced.
- SUSTAN BT will give very fine and smooth grain to the leather, hence it is also suitable for softy type of article. Since it is the vegetable tanning material it also will good Burnishability.
- SUSTAN BT will give good nap for Nubuck and suede article. Since it has tanning potentiality, it can be used along with vegetable tannin without Rechrome from Wetblue to dye for certain article (lining).
